

# Cyclehoop for Bollards

The Cyclehoop for Bollards converts existing bollards into secure cycle parking for a single bicycle. This product is made from brushed stainless steel or mild steel and has a neoprene lining to grip the bollard. This innovative design prevents thieves from lifting locked bicycles over the top of bollards and allows cyclists to secure their bicycle using a D-lock rather than a chain.

The Cyclehoop is easy to install and ideal for retrofitting to existing street furniture, making it great for locations where normal cycle stands cannot be installed and where pavement space is limited.
