

Public Bike Pump

The Public Bike Pump is a heavy duty product designed to be installed anywhere giving cyclists a free facility to pump up deflated tyres. This innovative product takes the form of the classical bike pump and comprises of robust stainless steel housing with a solid pump handle and an armoured hose.

Unlike competitors who use 304-grade stainless steel, we use 'Marine Grade' 316 stainless steel with a high quality brushed finish for durability, allowing to withstand constant public use and vandalism. Its modular design minimises installation and maintenance, making it an ideal solution for any public place.

It is a great accompaniment to our Public Bike Repair Stand.

Specification

268mm x 920mm

15Kg

Marine Grade' 316 Stainless steel

Armoured stainless steel air hose

Pump fits a wide range of bike valves

Surface mounted or submerged fixing

Maximum pressure: 220 PSI or 15 bar
